5.5 – First Differences Worksheet

MPM1D

1. For each table, create a third column to record first differences. Classify each relation as linear or non-linear.

a)

x	y
0	5
1	6
2	8
3	12

b)

x	y
3	−4
4	−1
5	2
6	5

c)

x	y
−1	1
0	0
1	1
2	4

d)

x	y
−5	8
−3	4
−1	0
1	−4

2. Each table shows the speed of a skydiver before the parachute opens. Without graphing, determine whether the relation is linear or non-linear.

a) There is no air resistance.

Time (s)	Speed (m/s)
0	0
1	9.8
2	19.6
3	29.4
4	39.2
5	49.0

b) There is air resistance.

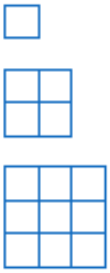
Time (s)	Speed (m/s)
0	0
1	9.6
2	16.6
3	23.1
4	30.8
5	34.2

3. Use first differences to determine which relations are linear and which are non-linear. Write an equation representing each linear relation. Extrapolate the relation to predict the outcome for the seventh step.

a)

Number of Houses	Number of Segments
1	
2	
3	
4	

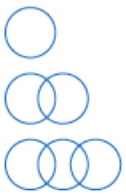
b)



Base Side Length	Total Number of Tiles
1	
2	
3	
4	

4. Use first differences to determine which relations are linear and which are non-linear. Write an equation representing each linear relation. Extrapolate the relation to predict the outcome for the seventh step.

a)



Number of Circles	Number of Intersection Points
1	
2	
3	
4	

b)

Number of Sides	Number of Diagonals
4	
5	
6	
7	

5. A pattern is made from toothpicks as shown.

a) Complete the following table.

Diagram Number	# Of Toothpicks
1	
2	
3	
4	

b) Use first differences to show that the pattern is a linear relation.

c) Write an equation for the relation

d) Extrapolate the relation to predict the outcome for the 10^{th} step.
